

## Oil & Gas Industry Case Study

# Petrofac

Industry: **Oil & Gas – North Sea**

### Background:

- Customer requirement was to migrate the data from a bespoke legacy work management systems into Primavera
- This project was extremely successful and led to other projects described below.

### Challenges:

- Project had strict timescale, which was driven by job requirements
- Client had significant volume of data to transfer - 50 projects, 50,000 activities, 500 activity code dictionaries, and 12,000 resource IDs to re-map.

### Solution:

- Used Legare's multi-threading scalability to enable the transfer to be carried out within the time constraints outlined by Petrofac.
- Collabro worked in partnership with the client to deploy Legare over Citrix.

### Result:

- Client had identified no alternative means of carrying out this task within the designated time scale - Legare achieved this.
- Petrofac has subsequently used Legare to create an interface between Oracle e-Business Suite and P6.
- Customer reordered 40,000 WBS lines automatically and created template WBS in 200 projects.
