

Oil & Gas Industry Case Study: Downstream Oil & Gas Company

Background & Challenges:

- Client wanted to reduce the reliance on IT and manual intervention by automating the importing of data from 3 main sources: Contractors, Estimators and SAP
- Long term users of Primavera P6
- Utilizing SAP as ERP system.

The main challenges were:

- Length of time and cost of Importing Excel data from Estimators, mapping codes and reformatting for compliance with Primavera
- Importing XER files from sub-contractors, removing unwanted data and mapping codes to P6
- Importing large volumes of actuals (>10,000 updates per week) from SAP, desire to see project cost items in P6, inability to break down data into labour and non-labour costs.

Solution:

- Rather than build a bespoke solution they chose Legare as a cost-effective, easy to use, supportable solution that would automate data load, mapping and transformation, with a fast implementation.

Result:

- All business areas can use existing business process
- Reduced time to import estimate data
- Primavera Admin map data from business data sources and manage import of data
- Fast implementation in less than two weeks
- Easy to use so doesn't require specialised training courses
- PMs can see SAP cost data in P6 as expense items
- Imported XER data cleaned – less P6 corruption.
